BASIC-ABSTRACT:

Process for picture production by means of the use of electric light sensitive agents consisting of a substd.
2,4-diaminotriazine:-

The light sensitive pigments are suitable for picture reproducing processes and have the common characteristics of emitting a yellow colour, insoluble in water and the usual organic solvents such as benzene, toluene, acetone, alcohols and aliphatic hydrocarbons and an unusually high light sensitivity. Very brilliant pictures are capable of being produced.

The best results were obtained with the compound
2,4-di-(1'-Anthraquinonyl -amino)-6-(1"-pyrenyl)-s-triazine.
